

Rental plants

We have more than 70 years of experience in the fields of developing, manufacturing, and marketing reliable water treatment plants. In this leaflet, you can read more about the different types of water treatment plants for rent:

- Filtration plants
- Softening plants
- Reverse osmosis plants (RO plants)
- Mixed-bed plants
- UV disinfection plants

Ready for use!

Our plants are ready for shipment, enabling us to meet your demand for water treatment here and now. All plants are designed for quick connection on site.

Application

Possible applications of our rental plants:

- Supply of drinking water and process water for emergencies and peak periods
- Temporary water supply in connection with renovation or replacement of existing plants hereby avoiding production down-time
- Filling of storage tanks and network in heating and power plants
- Water for pilot projects

Our rental plants are for sale, should you need permanent water treatment.

We gladly offer our help for start-up of plants and training of your operating crew.

Service

EUROWATER offers an international after sales service characterized by fast identification and problem-solving.

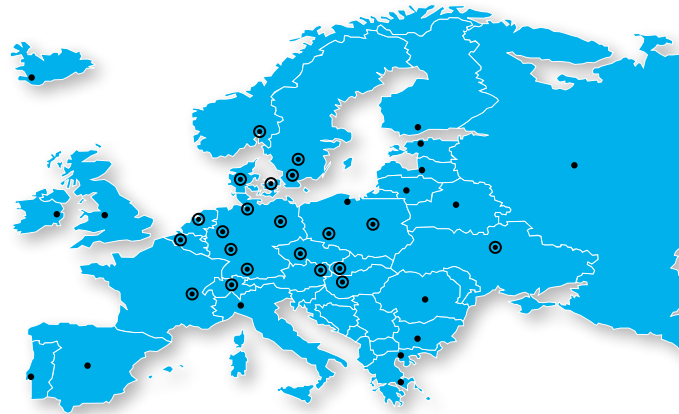

We offer a wide range of services, such as

- Stand-by service/service agreements
- Free water analyses
- Salt for softening plants
- Renovation/replacement and optimization of existing water treatment plants

Pure rental!

Are you in need of filtered, softened, demineralized, or bacteria-free water for a limited period of time?

We offer a wide range of complete, mobile water treatment plants for rental to customers who have a temporary need of water treatment. We have the right water treatment plant for small, medium, and large water consumption. The plants are ready for use.

EUROWATER
PURE WATER TREATMENT

Filtration

Flow up to 30 m³/h

In addition to filtration plants, we offer clean water tanks and booster pump systems.

Demineralization

Flow up to 5 m³/h

Water quality: Ultra-pure water typically < 10 µS/cm

Frame-mounted plants with RO plant with mechanical filter and softening plant as pre-treatment as well as separate unit comprising tank and pump.

Demineralized water of the highest quality

Flow up to 28 m³/h

Water quality: Ultra-pure water typically < 0.1 µS/cm

Mixed-bed plant with external regeneration.

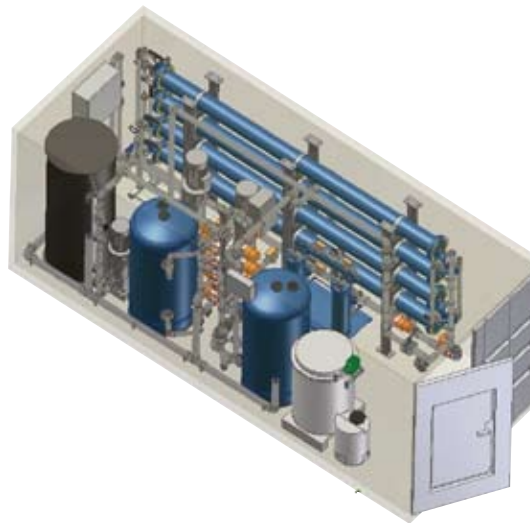

Softening

Flow up to 30 m³/h

Water quality: Softened water typically < 0.5 °GH

The plants are mounted on robust transportation skids.

Demineralization plants in insulated 20 feet container

Flow up to 20 m³/h

Water quality: Ultra-pure water typically < 10 µS/cm

Plants in container: RO plant with mechanical filter and softening plant as pre-treatment.

UV disinfection

Flow up to 150 m³/h

Water quality: Bacteria-free water

Mobile UV plant: An efficient and quick solution in connection with bacteriological contamination.
